

YOUNAS ASADULLAH

📍 Jazan, Saudi Arabia

⚡ PROFESSIONAL SUMMARY

Saudi Council of Engineers (SCE) Registered Electrical Engineer with over **9 years** of experience in electrical **Testing, Commissioning, Operation & Maintenance, and Renewable Energy** projects within utility-scale power systems. Possesses extensive experience in EHV/MV/LV power networks, including 380KV, 132kV GIS, 13.8kV, and 11kV systems. Adept at ensuring compliance with international standards, safety regulations, and quality requirements while delivering reliable and efficient commissioning solutions for power utility and renewable energy projects.

⚙️ CORE COMPETENCIES

- Testing & Commissioning of 380KV/ 132kV GIS / 13.8kV / 11kV Systems
 - Protection Relays, CT/PT, MCCB & Auxiliary Relay Testing
 - Protection Scheme Verification & Functional Testing
 - CT/VT Ratio, Polarity & Insulation Resistance Testing
 - Annunciator & Trip/Alarm Circuit Verification
 - Contact Resistance Measurement (CRM) and SF6 Gauges Testing
 - ETAP (Load Flow, Short Circuit, Relay Coordination)
 - Root Cause Analysis (RCA) & Fault Isolation
 - Preventive & Predictive Maintenance (MV/LV Systems)
 - Energy Meters Test by Zera MT 3000, M-Cubed100, Communicator and Landis + Gyr
 - Primavera P6, AutoCAD, Revit, Dialux, Siemens (DigiSi), ZIV (Zivercom and ZIVNET)
 - Test Equipment: Sverker 780, OMICRON CPC 100, Freja, Megger, DILO, MOM, EGIL
 - Renewable Energy: Installed Residential and Commercial Solar PV Projects (5-100KW)
 - Electrical Safety (LOTO, JSA, Risk Assessment)
 - Technical Reporting & Client Coordination
 - SAP PM and KEOMS for Corrective and Preventive Maintenance
-

📁 PROFESSIONAL EXPERIENCE

**Alfanar Engineering Services – SAMTAH PV Project, Jazan, Saudi Arabia
Dec 2025 – Present**

- Performed testing and commissioning of **380KV, 132kV, and 13.8kV systems**.
- Conducted auxiliary relay testing (86, 94, 27, 59, 62, 74) using **Sverker 780**.
- Verified relay characteristics including:
 - Pickup and drop-off voltage/current
 - Operating and reset time
 - Burden testing
- Relay Testing acceptance and configuration test by using Siemens (DIGSI), ZIV (Zivercom Plus and Zivnet) and Freja.
- Tested MCBs (SP, DP, TP, TPN) with trip curve characteristics (C2, C6, C10, C20).
- Performed **complete panel scheme verification**, including:
 - DC wiring checks
 - Internal & external interference circuit verification
 - Continuity testing
 - Relay binary I/O verification
 - Functional checks of auxiliary relays
- Conducted **GIS SF₆ gas analysis and pressure stage verification** using DILO equipment.
- **Enegy Meters and Power Quality Meters** Testing by using:
 - Zera MT 3000 (Pluse Test for Active and Reactive Power Import and Export)
 - M Cubed 100 (Secure EM), Landis Gyr and Communicator (PQM EM)
 - Freja by Injection Current and Voltage with Phase angle
- Performed **circuit breaker testing** using EGIL, MOM, and Megger, including:
 - Opening and closing time tests
 - Close-Open (CO) and Open-Close-Open (OCO) operations
 - Contact resistance measurement (CRM)
 - Insulation resistance (IR) testing
- Conducted CT/VT testing using **OMICRON CPC 100 & Megger**, including:
 - Ratio, polarity, and winding resistance tests
 - Burden and insulation resistance testing
- Verified protection schemes and prepared **test reports and NCRs** for non-compliance.

Electrical Shift Engineer – Testing, Commissioning & O&M

**K-Electric, Karachi, Pakistan
Aug 2018 – Dec 2025**

- Managed testing, commissioning, and O&M of **150+ 11kV feeders**.
- Performed relay, CT/PT, and MCCB testing including IR, ratio, and polarity checks.
- Managed team of 150 employees including Assistant engineers and technicians and assigned them daily work task within given KPI and TAT

- Reduced feeder tripping through **effective fault diagnosis and corrective actions**.
- Executed feeder isolation, shutdown, and energization under **LOTO procedures**.
- Conducted **thermographic inspections** and root cause analysis of faults.
- Coordinated with Protection, Projects, and UG teams for commissioning readiness.
- Performed **relay coordination and short circuit studies using ETAP**.
- Maintained operational records in **SAP PM and KEOMS**.

Application Engineer – Power & Solar Division

Synergy Corporation, Karachi, Pakistan

Jul 2017 – Apr 2018

- Designed and supervised **Solar PV systems (5–100 kW)**.
- Prepared **BOQs, technical proposals, and tender documentation**.
- Coordinated testing and commissioning with clients, ensuring compliance with specifications and timelines.

KEY PROJECTS & ACHIEVEMENTS

- Reduced feeder tripping by **35%** through load balancing and fault response improvements.
- Developed **standardized MV maintenance checklists** adopted department-wide.
- Delivered pre-commission stage projects with given time.
- Awarded **Best Performer (2020)** during rain emergency and COVID-19 operations.
- Consistently achieved feeder KPIs through proactive maintenance strategies.
- Identified and reduced **technical losses**, improving system reliability.

➡ EDUCATION

Master of Engineering – Energy Management

NED University of Engineering & Technology, Karachi (2017 – 2020)

Bachelor of Electrical Engineering

NED University of Engineering & Technology, Karachi (2013 – 2016)

CERTIFICATIONS & TOOLS

- Registered Engineer – Saudi Council of Engineers (SCE)
- ETAP – Load Flow, Short Circuit & Relay Coordination
- SAP PM / CMMS (KEOMS)
- AutoCAD | Revit | DiaLux | Primavera P6

- HSE Compliance | LOTO | Incident Reporting
- Solar PV System Design

PROFESSIONAL INTERESTS

- AI Applications in Electrical Power System
- Swimming & Traveling
